Congratulations on having your abstract accepted to the ISAAC 2018 conference.

To ensure that all abstracts are of a publication-ready standard, we are inviting all authors to review and make minor edits to their abstract in the OpenConf Submission system: https://www.isaac-online.org/conference_2018/author/edit.php Please use your submission ID number and associated author password to complete this revision. The system will close on April 20th 2018, after which time new edits will not be possible.

Please note that the purpose of this revision is to improve clarity and consistency. Any changes made to the topic or content of your presentation will not be accepted.

All abstracts must be presented in clear English, and should be of a quality suitable for publication. You may wish to arrange for the review of your abstract by a colleague, a university publications or research office, or by a professional copy editor.

Chinese Interpreting Service for Accepted Authors: If you would like to re-submit your original abstract in Standard Chinese, we will pay to have this interpreted into English. We will include both the Chinese and interpreted English versions in our final conference program.

Suggestions for Abstract Revision
Please note the following specific suggestions from our reviewers:

1. Many of the submissions contained spelling, grammar, typographical, and terminology errors. Please ensure that:
   - You correct any spelling errors (including names of cited authors, and errors in the submission title).
   - You use person first language to describe people with disability. For example, please write “people who use AAC” or “children with ASD” rather than “ASD children”, “AAC users”, “non-verbal students”, etc. The terms “intellectual disability” or “learning disability” are strongly preferred over the term “mental retardation”.
   - Your title is typed in sentence case, rather than ALL CAPITAL LETTERS.
   - Your abstract is written in your own words, and that other works you have used are appropriately referenced.

2. To ensure that the widest range of people can understand your abstract and your presentation, please:
   - Write all acronyms out in full the first time they are used (e.g. ‘SMA’ would need to be written as Spinal Muscular Atrophy in the first instance, etc.).
   - Avoid unnecessary use of technical language, if a simpler term could be used.
3. Some abstracts made broad claims that were not clearly supported by the data. Please describe the reach of your findings appropriately by:

- **Using cautious phrases** such as “this data seems to indicate...”, or “these findings suggest that...” rather than definitive words like “show” or “prove”.
- **Report your statistics clearly and carefully.**
- Make it clear if your findings apply only to your specific study population. **Be careful not to over-generalise your results** to all people who use AAC.

4. Finally, to ensure good alignment with the conference aims and scope, please ensure that:

- You **clearly explain the relevance of your abstract** and presentation to the field of AAC.
- All **workshop abstracts** contain clearly described learning outcomes and interactive activities.
